. A: You can use xseg.vim plugin. This plugin is not activated by default, so you need to install it via a vim file. First, install xseg.vim and vim-plug plugins: `$ git clone -/vim/plug $ cd -/vim/plug $ git clone -/vim/xseg` Then install xseg.vim using `:PlugInstall`. After that you can activate it by a single command: `:Xseg` Plugin homepage 1. xterm-clipboard 2. Vim-7-1-unstable Also, I am new to Vim (just installed for the first time a couple of days ago) but I also use xterm-clipboard so if you are interested you could install it from this link. The xterm-clipboard plugin allows you to copy and paste from xterm to other applications such as Vim. Did you try using XTerm-copy mode? See the details here: I've found it works very well. Patients' decision to consent to organ donation. One hundred and one consecutive patients with brain death were interviewed in the intensive care unit to determine their consent to organ donation and to assess other factors that might influence their decision. The main reasons given by patients for not consenting were that they did not want to donate (53%), that their families did not wish them to do so (24%) and that they were upset by the situation (16%). Among the potential donors, relatives were willing to consent in 85% of cases. Only 17% of patients were found to be unaware of the fact that they had brain death, while 13% could not remember the process leading up to it. The fact that relatives could not be contacted was found to be the main reason for the poor rate of consent. In 32% of patients in whom a decision had been taken to withdraw life-sustaining treatment, consent for organ donation was revoked later: Update 1.20! All activities added! I'm happy 82157476af
